## PRODUCT FEATURES

**Environment:** Android, Eclipse

The central focus of any organization, while undertaking a quality improvement effort, is to ensure seamless and efficient flow of information. It is imperative to deal directly with the barriers that clog free flow of information. iNet is the gateway that unifies access to all enterprise information and applications, within the boundary of a company or organization. It helps the organization to manage its data, applications and information with much ease.

These intranet web based application are highly feature-rich along with showcasing high levels of performance and reliability. Our web portals are developed keeping in mind the exact need of our client's business criteria and association. These web based applications help clients to create and manage Company profiles, Contact management, Tasks, Projects, Human Resource, CRM, Sales and other Workflow needs of today's modern enterprise needs.

We also incorporate the various facets of work flow management, projects and MIS reports, documents and discussion forums in order to direct yet virtually interact with their clients, employees and service providers.
