Designed a web application to digitize record management system for a US-based religious organization

Case Study

Industry:	Religious
Technology:	Angular, Photoshop
Country:	USA

Client Profile:

The client is a religious organization having hundreds and thousands of followers all over the world. On a regular basis, the client engages in a host of humanitarian and charitable endeavors through a separate non-profit organization that heads numerous projects globally that addresses healthcare, education, environmental causes, and community-building campaigns.

Challenges:

The client reached us with a requirement to develop a web application to digitalize a record management system for their religious organization in the United States of America. They needed a system that can easily manage the information of all the devotees, followers, and donors and their families.

Solution

Experts at KCS analyzed the client's requirement and concluded that they need a user-friendly and robust web application to manage the records of devotees, donors, and followers. Here is the list of solutions offered by KCS:

- Our experts used the latest Angular framework for designing the record management system
- The use of the Angular framework helped the web application in being intuitive and user-friendly
- Our experts used built-in plugins of the Angular framework to make the web application responsive and browser-friendly
- All the information related to donors, followers, and devotees and their family are shown in a structured and tabular format

- We also used Photoshop software to add more visuals to the web application's UI/UX
- Our experts designed captivating graphics to show the data of devotees, followers, and donors

KCS Approach

As per the client's instructions, our experts developed a user-friendly centralized record management system using the latest Angular framework. The framework is featured with built-in plugins that enhanced the security and performance of the web application. In addition, the Angular framework made the UI/UX of the web application more intuitive and responsive. The use of Photoshop software gave web application extra graphics to show the details of the donors, devotees, and followers.

Impact

The solution to developing a centralized record management software streamlined several operations in the client's religious organization. With this system, the client can store and manage unlimited data hassle-freely. The centralized record management system is capable to store and manage information of both donors, followers, and devotees, and their families. The client has already tried and tested the application is completely satisfied with the outcomes.
