

Industry: Power Sector

Deliverables: Android & iOS Mobile App

Technology: Android, iOS, SAP Integration

Country: India

Project Goal:

Torrent Power supplies electricity to more than 3 million customers in around 6 cities. They wanted to streamline their interaction process and reinforce Torrent's commitment to deliver high-quality service. The idea was to build a mobile app to help customers register no-power complaints directly without having to reach the call center. They also wanted to digitize bill payments so that customers can avoid long queues and pay bills instantly on the go as well as help their residential and industrial customers manage electricity usage hassle-free just in one click.

Challenges:

- Managing more than 3 million customers through call centers had become a challenge
- Lack of direct access to the "No Power Response Team"
- Lack of dynamic platform to streamline interaction and simplify operations.
- Lack of automation to manage manual processes including bimonthly billing & services.
- Traditional management process and physical call centers were expensive.
- Managing Mobile Vans to collect payments across the city was a time-consuming process and expensive.

“Leveraging one of its kind mobile application to help customers register power supply related complaints directly without having to reach the call center. The app is also power-packed with features for instant bill payments, real-time service notifications, GPS tracking of customer centers, electricity management for residential as well as industrial customers.”

Solution:

Registering Complaints and Paying bills is an unpleasant experience for customers. Torrent Power wanted to change this image by digitizing their entire range of services.

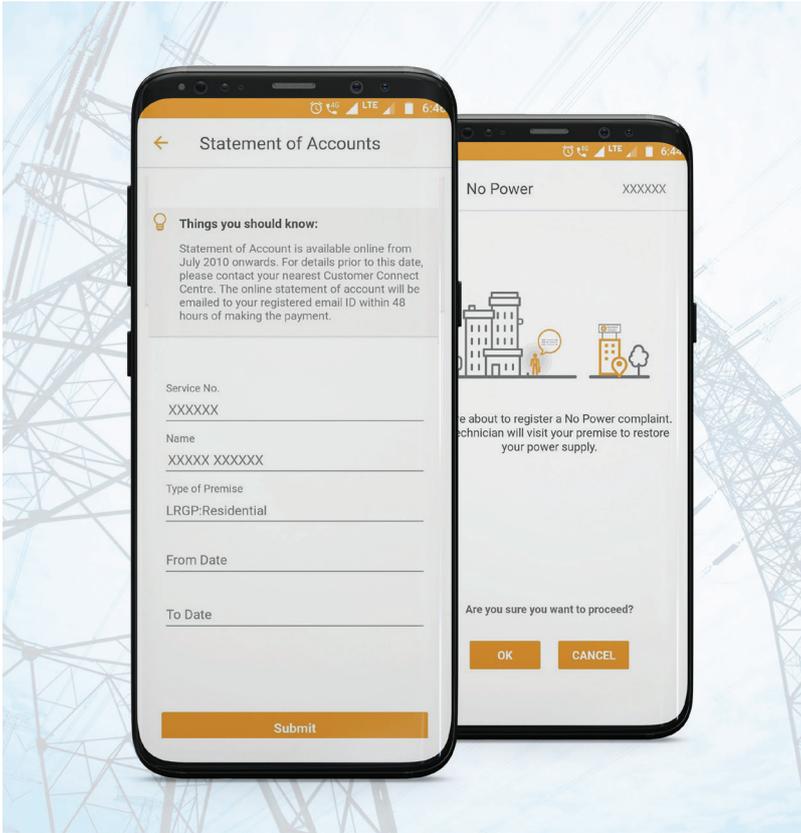

Torrent Power Connect App and Web Portal is one-of-its-kind utility application in the country providing seamless online experience to customers in the digital era. An extension to its existing self-service portal, Torrent enabled customers to gain direct access to its "No Power Response Team" through robust, user-friendly mobile application.

Customers can now easily register power supply related complaints, make instant bill payments, get real-time service notifications and track nearby customer centers and mobile vans. Additional, TPL also tied up with various new online payment platforms to offer attractive discount schemes and thus encourage a transition from physical to online bill payments.

While the app carries all the instant service related features for the on the go facility, the Web Portal hosts all its application processing services. Both platforms put together to simplify the interactions and help Torrent deliver high-quality services. The app also helps customers find technicians if they are facing any power supply issues. The online meter reading feature helped users keep a track on their daily energy usage. This promoted energy conservation and improved reliability.

Features:

- Online instant bill payments
- No-Power complaint registration
- Real-time service notifications
- GPS tracking of customer centers & mobile vans
- Personalized Dashboard
- Application status updates
- Online meter reading
- Download e-bill
- Submit feedback
- Report theft easily

Result:

Being one of the leading brands in the Indian power sector, TPL wanted to harness the power of smartphone penetration in the entire country with a mobile app which can help their users use their services on the go hassle-free.

The Mobile and Web application solution provided by us was power-packed with all the required features and functionalities that client needed to digitally transform their service offerings. The Android & iOS solution was the first of its kind utility app in the country. It is available in both iOS and Google Play Stores. With 4.4 rating, more than 5, 00,000 users are using the application currently. With constant updates, the app is now Faster, Simpler and Better, offering unparalleled convenience.
